

Take control of Header Bidding with user-friendly HB MANAGER

Relevant Yield's HB Manager is a fully independent solution from all SSPs & Ad servers, providing Sellers with agnostic control of Header Bidding with no coding. Sellers can effectively optimise ad sales and improve their setups while staying in control and reducing dependency on engineers.

BENEFITS:

HB Manager simplifies and automates Header Bidding processes, saving time and reducing risks while giving users full control. Coming with a wrapper supporting all Prebid products, it opens up revenue potential for Sellers. The user-friendly UI helps Yield Managers apply changes without any coding in a timely manner.

FEATURES:

- Full control over Header Bidding setups with a Prebid wrapper.
- Easy configurations without coding from a UI.
- Advanced multivariate testing capabilities.
- Server-side integration option.
- Run and control Amazon TAM/UAM with Prebid from the same UI.
- Ad Refresh on the whole auction, Floor price rules across SSPs, Lazy Loading, Universal ID.

HOW DOES HB MANAGER WORK?

Relevant Yield's HB Manager comes with a neutral Prebid wrapper that supports all Prebid products (Prebid Client & Server, Prebid Video, Prebid Mobile, Prebid UserID, AMP, etc). Once our programmatic tag is added to the script of the site/mobile app, the module acts as a remote control for Prebid.

Increase in ad revenue.

Easy changes to setups without coding skills.

Total control & transparency over ad stack.

Independence and expertise for better yield decisions.
